SUMMARY

Site Reliability Engineer, 10+ years (GitLab, Resend, Erste Bank, Ketryx). Go, Kubernetes, PostgreSQL operations, release engineering, zero-downtime migrations.

WORK EXPERIENCE

Resend

Remote

Site Reliability Engineer

April 2026 - Present

- Drove the Supabase-to-PlanetScale production migration end-to-end: app readiness, cutover sequencing, rollback plan, and runbook rehearsals, then coordinated the live cutover with PlanetScale engineers. Zero downtime across 3 core databases and TBs of data.
- Led the CI migration from GitHub Actions to Depot CI, from evaluating alternatives through rollout.
- Planned the disaster recovery framework and wrote the backup and restore-test runbooks.
- Designed a canary-in-production deployment strategy for safer releases and faster rollback.
- Improved incident management and on-call processes as part of the Incidents Guild.
- Contributed to HIPAA compliance work, strengthening infrastructure security controls.

Ketryx

Vienna

Senior Infrastructure Engineer

September 2025 - March 2026

- Introduced containerization to the platform (app + background worker), unblocking the move from Beanstalk to Kubernetes and per-tenant provisioning.
- Provisioned isolated single-tenant environments for customers via IaC.
- Introduced Terraform as the foundation for the hub/spoke platform.
- Working with Beanstalk, Kubernetes, Docker, and Prometheus.

Career Break

Vienna

January 2025 - August 2025

- Learning German as part of the integration process in Austria.
- Working on multiple personal projects: Voklit, Nameem, and sharing.fm.

GitLab

Remote

Site Reliability Engineer

October 2021 - December 2024

- Engineered and executed Kubernetes clusters rebuild and applications rollout, resulting in a handbook to guide through clusters booting up, and a significant replacement for OpenSSH with GitLab Shell.
- Led the effort to enhance the detection of anomalies and potential bottlenecks in release pipelines, utilizing GoLang/Ruby for automation and continuous improvement processes.
- Led the automation effort for GitLab release process, resulting in a 75% removal of monthly release manual steps.
- Restored the production hot patching mechanism, resulting in a working system in critical situations or massive security incidents.
- Observability with Prometheus, Grafana, Thanos, ES, and Kibana to identify and address system issues, ensuring optimal performance and uptime across the platform.
- Member of **Release Managers**, Coordinated and streamlined release processes to ensure timely delivery of SaaS and Self-Host updates, enhancing system reliability and user satisfaction.

Erste Bank

Vienna, Austria

Cloud Engineer

December 2019 - September 2021

- Designed a scalable Prometheus + Thanos setup enabling 12+ months of historical metrics retention with minimal query latency.
- Developed a lightweight Python alerting proxy to bridge air-gapped Prometheus stacks with existing alert pipelines, reducing alert delivery failures by >95%.
- Migrated traditional applications to cloud environments using Kubernetes and ECS, enabling increased scalability and efficiency.
- Constructed and deployed infrastructure as code for AWS resources using CloudFormation, optimizing cloud infrastructure management.
- Developed and contributed patches to open-source code utilizing Python and GoLang to enhance cloud infrastructure efficiency.
- Designed and implemented CI/CD pipelines using Jenkins to streamline the deployment process, ensuring efficiency and speed.

Adidas Runtastic

Vienna, Austria

Backend Software Engineer

June 2017 - November 2019

- Developed integrations with Adyen, PayPal, Apple, and Google payment providers to streamline subscription purchase processing.
- Developed a framework to facilitate the company-wide implementation of SLOs and Error budgets within the SRE team using modern tools and methodologies, enhancing service reliability.
- Architected and implemented an essential payment processing adapter, ensuring smooth integration and functionality with Adidas' systems.
- Coordinated API-level integration releases with partners, ensuring API interactions maintain the required standards.
- Designed and optimized a scalable microservices architecture, enhancing backend infrastructure robustness utilizing Ruby and JRuby.

Various Companies

Cairo, Egypt

Fullstack Developer

April 2015 - June 2017

- Ruby on Rails Developer at VeryCreatives 2017.
- Ruby on Rails Developer at Eventtus 2017.
- Ruby on Rails Developer at Webkeyz 2015.

PROJECTS

Founder

January 2025 - September 2026

Voklit • **voklit.com**

- Built a 1.8k MRR side project for making phone calls with no SIM and no roaming fee using Go/Next.js/Telnyx.

EDUCATION

Bachelor of Computer Science

Egypt

Misr Higher Institute for Commerce and Technology

2014

SKILLS

Go, Kubernetes, PostgreSQL, Terraform, AWS, GCP, Prometheus/Thanos/Grafana, Docker, Ruby, Python, GitLab CI.
